CURTAINS

Harrier cubicle and shower curtains

The Harrier concept: ready made cubicle curtains and shower curtains from stock.

A simple idea that removes at a stroke the biggest problem with hospital cubicle curtains - delay! The time constraints between choosing curtains; choosing a colourway; making-up; and hanging the curtains, lead inevitably to uncertainty and the very real risk of things going wrong. Harrier will dramatically improve this scenario.

All Harrier standard products are available from stock, for immediate dispatch. This means that new installations or refurbishments on a short timescale (as is so often the case) are not held up by the final item to go in.

On working wards, the emphasis on infection control means that curtains often have to be changed at short notice - so spare sets must be immediately to hand. This is leading to a complete reappraisal of the curtain stock situation - and Harrier, with its standard sizing and off-the-shelf capability is proving to be the answer.

Harrier ready-made cubicle curtains from stock

- Traditionally made
- Standard sizes from stock
- Four colour choices
- Inherently flame retardant
- Washability to NHS standards

Harrier ready-made cubicle curtains are available from stock, for immediate dispatch. With a curtain drop of 2030mm they will fit in perfectly with the standard cubicle track height of 2100mm from floor level. Four different widths of curtain are offered, allowing almost any size of cubicle track to be accommodated. Harrier curtains are stocked in four attractive colourways: Meadow, Sky, Russet and Fawn, to allow coordination with most existing colour schemes.

Traditionally made fabric curtains

The curtains are manufactured from high quality, inherently flame-retardant, 220gsm polyester fabric. They are traditionally made, with sewn side and bottom hems, and 25mm flame-retardant heading tape. They are fully compliant with hospital hygiene standards and are able to withstand repeated washing at high temperatures.

Infection control

With the growing importance of infection control policy, it is imperative that a regular programme of curtain changing is maintained. But in addition to this, there will always be the emergency scenario where curtains have been soiled and become an immediate infection risk. The requirement for patient privacy means that soiled curtains must be replaced promptly when they have been taken down for washing. It is in this situation that a stock of standard sized Harrier curtains are invaluable.

All Harrier products are available through a nationwide network of distributors, with experienced installation and service teams providing an unrivalled level of support.

Harrier disposable cubicle curtains

Infection control

One of the most important aspects of the hospital environment is infection control. It is now a major factor in the assessment of a hospital's performance and rightly so, as any improvements in infection control can cause an immediate increase in the number of lives saved. And as risk of infection is reduced, the quality of life for patients is enhanced.

Harrier disposable curtains should become an integral part of every hospital's overall infection control strategy. A programme of regular replacement can be augmented by a policy of immediate change in any areas that have been exposed to high infection risk.

Recyclable and anti-bacterial

The curtains are manufactured from 100% recyclable polypropylene and are treated with Endurocide anti-bacterial formulation. Endurocide treated fabric has been independently tested against a range of bacteria including MRSA. It has proved to be extremely effective, in both in anti-microbial activity and in creating a zone of inhibition around the fabric. The test results are available on request.

Enhanced quality of life for patients and staff

Conventional curtains that have been through many wash cycles soon begin to look worn and tired. Harrier disposable curtains will always look fresh and new - because they are! The curtains are permanently pleated as part of the manufacturing process, which ensures that they will always stack neatly, and close to the wall, giving the ward a bright and orderly appearance at all times.

DPL2 with easy-load gliders - the simple solution

Harrier DPL2 disposable curtains with easy-load gliders are available from stock in four attractive colours as shown below, with a 2m curtain drop. Each curtain will fit a track length of up to 5.75m, and the curtains may be cut down in both width and drop. They are flame-retardant to BS5867 Part 21980 Type C.

DPL1 with eyelets

Harrier disposable curtains are also available with eyelets to fit existing cubicle track glider hooks. This version is stocked in **sky blue only**, and will fit almost all makes of glider hooks or roller hooks.

All Harrier products are available through a nationwide network of distributors, with experienced service teams providing an unrivalled level of support.

Harrier disposable curtains may be cut down in both width and drop for window openings. The label provides space to enter the date for replacement.

The DPL2 easy load glider system in operation. Where tracks are provided with a curtain removal point, such as shown here on Movatrack or on Vitesse 6200 window track, curtains may be taken down or re-hung extremely quickly, with the integral gliders simply slotting into place.
